

How to make a PDF time stamp signature LTV enabled

Code in this example shows how to add signature verification information to the Document Security Store of a PDF complying with PAdES B-LTA level (such as a PDF signed as shown by the "Sign PAdES B-LTA" sample) so that the signature is LTV enabled.

Note that the document shown by this sample (this PDF) is NOT actually signed, the code adding verification information and saving the PDF is included but is not called when this demo runs online.

To add signature verification information to a PDF to make the signature LTV enabled, download this sample project, in the sample code replace the "JohnDoe.pfx" file/password with the file/password of a valid certificate and set the onlineDemo variable to false, then run the sample and check the result produced by the Do_B_LTA_LTV() method.
