Copy and combine paragraphs

This sample demonstrates how to manipulate (swap, join or copy) whole paragraphs using GcWord. The sample code searches for key text sequences ("This is the <number> paragraph") to identify the paragraphs to manipulate.

This is the first paragraph of the original document. It contains several text runs with different formatting, such as bold text, italic text, bold italic text, bold italic blue text, and bold italic red text on a light gray background.

This is the second paragraph of the original document. Like the first paragraph, it contains several text runs with different formatting, such as bold text, italic text, bold italic text, bold italic dark orange text, and bold italic light yellow text on an aqua background.

This is the third paragraph of the original document. Like the first two paragraphs, it contains several text runs with various formatting, including bold text, italic text, bold italic text, bold italic green text, and bold italic light blue text on a dark blue background.

This is the fourth paragraph of the original document. Like other paragraphs, it contains several text runs with various formatting, including red bold text, green italic text, blue bold italic text, bold italic bright orange text on dark red background, and bold italic light green text on a dark yellow background.
